

Installation

Howard Lin, Randy Chen, Cody Abe

April 26, 2017

Installation

- If the requirements have been met, all that is required to install the program is to clone this repository into a directory with the following command:

```
$ git clone https://github.com/randy-chen/422.git
```

Pre-flight

- Move your CSV file (which contains the information about the objects you would like to sort into groups) into [cloned-dir], where [cloned-dir] is where the directory of the cloned git repository is stored.

Use:

- Execute the following command whilst in your [cloned-dir]:

```
$ python3 DuckDuckGroup.py <your_CSV_file>
```

- Launch a web browser and navigate to the following address:

```
localhost:5000
```

- Click on the upload CSV file and you should see the following:
- Click on the generate groups button and you should then see the groups generated.
